BOX 1148, CHEYENNE, WYOMING 82001

TO: Users of Wyoming Agricultural Statistics

It is with pleasure that we provide you with a complimentary copy of the 1981 issue of "Wyoming Agricultural Statistics". This publication contains data pertaining to Wyoming agriculture. Included are data on crop and livestock production, income, stocks, inventories, prices, farm labor, livestock movement and weather for the State. County estimates are also included if available. You will find current data and many historical tables and graphs.

This issue updates the major series of agricultural statistics on crop and livestock production and farm income. Estimates from 1975 through 1979 are revised. The figures in this puolication reflect revisions resulting from this review. Data included in this bulletin supercedes data in earlier annual summaries.

Your comments and suggestions to improve this report will be appreciated.

Additional copies are available upon request.

TABLE OF CONTENTS

PREFACE 3

REPORTS issued during year 4

GENERAL 5-22
- Wyoming agriculture 1980 6
- Wyoming's rank in agriculture. 7
- Rank of Wyoming's counties 7
- Number of farms and ranches. 8
- Real estate value and taxes. 9
- Income from farming. 10
- Cash receipts. 11
- Farm production expenses 12
- Value of production by commodities 13
- Number of farm workers 14
- Weather-temperatures 15
- Weather-precipitation. 16
- Temperature extremes 17
- Spring freeze hazard table 18-19
- Fall freeze hazard table 20-21
- Map of river drainage areas. 22

LIVESTOCK 23-50
- CATTLE 24-34
  - Inventory. 24
  - Supply and disposition 25
  - Production and income. 26
  - Inventory by classes 27
  - Cattle moved on brand certificates . 28-29
  - Milk cows and production 30
  - Milk and cream 31
  - County estimates 32-34
    - Cattle. 32
    - All cows. 33
    - Milk cows 34
- SHEEP. 35-44
  - Inventory. 35
  - Classes and lamb crop. 36
  - Production and income. 37
  - Wool-supply and disposition. 38
  - Sheep moved on brand certificates. . 39-40
  - Sheep and lamb losses by cause . . . 41-43
  - County estimates - stock sheep 44
- HOGS 45-47
  - Inventory and pig crop 45
  - Supply, disposition and income 46
  - County estimates 47

LIVESTOCK - Continued
- SLAUGHTER. 48
- CHICKENS 49- 50
  - Inventory, disposition and income. . . 49
  - Eggs, disposition and income 50
- BEES-HONEY 50

CROPS 51-100
- Prod 52
- ate 53- 59
- cer, spring, all. 53
- ats, rye 54
- s,sugar beets,potatoes. . . 55
- Co 56
- ay, alfalfa, other 57
- Potatoes-production and stocks. . . 58
- All crops by irrigated and non-irrigated. 59
- Winter wheat varieties 60
- Barley varieties 61
- Grain stocks 62- 66
- County estimates 67-100
  - All wheat 68- 70
  - Winter wheat. 71- 73
  - Spring wheat. 74- 76
  - Barley. 77- 79
  - Oats. 80- 82
  - Dry beans 83- 85
  - Sugar beets 86- 88
  - Corn. 89- 91
  - All hay 92- 94
  - Alfalfa hay 95- 97
  - Other hay 98-100

PRICES 101-110
- Prices received for livestock and crops. 102-103
- Index numbers of prices received . . . 104
- Prices paid by farmers 105-110

SCHEDULE of reports released 111

Our sincerest thanks to the following who supplied photographs for this publication: Front and Back Cover - Wyoming Wildlife. Other photos by the staff of the Wyoming Crop and Livestock Reporting Service.

PREFACE

This publication presents major agricultural statistics developed by the Wyoming Crop and Livestock Reporting Service. Included are data relating to livestock numbers and production, crop acreages and production, farm income, prices and weather information about Wyoming's agriculture. State estimates are shown for five to ten years, county estimates of livestock for January 1, 1977-81 and county estimates for crops are shown for 1975-80. This issue updates county data for the years 1975 through 1979 as published earlier.

I want to give a special thanks to the many individual voluntary reporters among the Wyoming farming, ranching and agri-business community. They unselfishly gave of their time and effort in reporting various statistics related to their farm or ranch and business activities. This information would not be possible without their devoted service. We would like to thank the Livestock Sanitary Board and the Wyoming Stockgrowers Association who provide access to the information used in developing the livestock movement data both in to and out of Wyoming.

Collection of data for making these estimates is made possible through the cooperative effort of the Wyoming Department of Agriculture and the Statistical Reporting Service of the U.S. Department of Agriculture. Funds are furnished by both departments which have had a cooperative agreement since 1923. Publication of this report was made possible through the cooperative effort of these two agencies along with the University of Wyoming Agricultural Experiment Station, Division of Agricultural Economics.

Estimates presented in this publication are based on data provided by agriculture producers and agribusiness establishments. Data for many of the estimates were obtained through special mail surveys. "Respondent burden" is a significant problem and we are doing everything possible to rotate our statistical samples, reduce questionnaire length, use other available data, etc.

More sophisticated probability sampling techniques are being utilized today. One technique used is to account for all the agriculture within sample segments of land randomly selected throughout the State. Although only a small portion of the total land in the State is included, this sample of land has been selected so that the segments represent a complete coverage of agriculture in Wyoming. All agriculture within these segments are expanded to represent the State.

An additional sample source has been developed for estimating livestock in Wyoming. A list of all livestock producers in the State is compiled by size of operation. This list comprises a list frame for sampling. A sample of producers is selected from this list and the area frame (land area segments) sample is used to represent these operators whose names are not on the list. Therefore, when the two sample sources are combined, this technique is called "Multiple Frame Sampling". The two sample sources are used together in arriving at the total number of cattle for the State. The livestock list has now been expanded to include all crop operations. This will enable us to select better acreage survey samples for making crop estimates.

Current reports and forecasts issued in accordance with the time schedule published on page 4, may be obtained by checking the release(s) desired on page 111, and sending your request to our office.

Additional copies of this publication are available upon request to the Agricultural Statistician, P. O. Box 1148, Cheyenne, WY 82001. Copies may also be obtained from the Commissioner, Wyoming Department of Agriculture, Cheyenne, WY 8200?; or Head, Division of Agricultural Economics, University of Wyoming, Laramie, WY 82071.

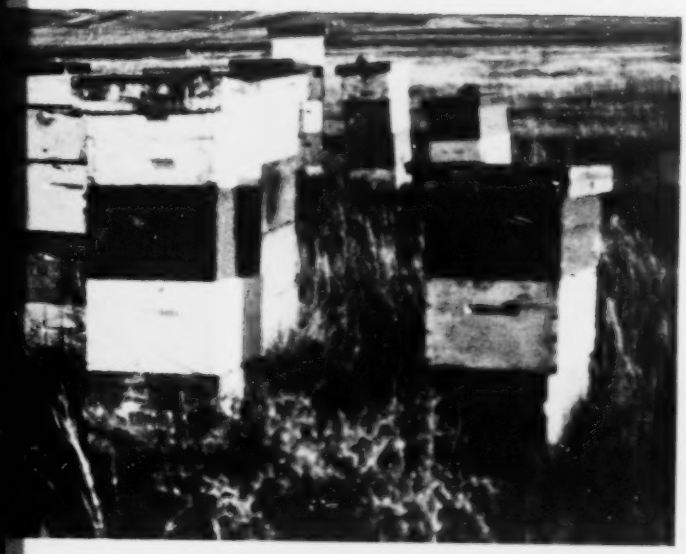
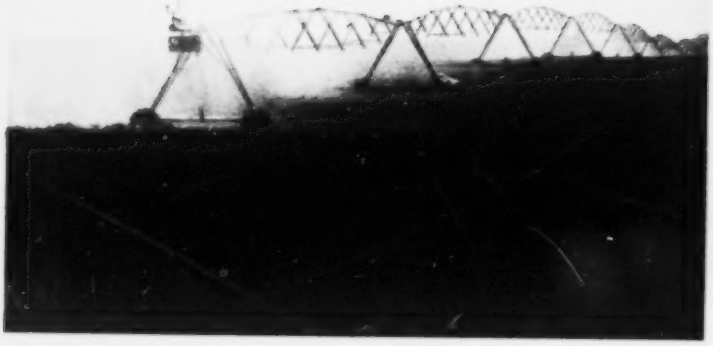
Farmline	Monthly	Mid-Month
Cost of Production	Annual	Mid-Year
Farm Production Expenditures	Annual	June

General





Wyoming's farm and ranch operators' income declined sharply during 1980 to total $19.9 million after inventory adjustment. The total net farm income was off $56.9 million from 1979 and well below the $55.3 million of 1978. The net income per operation averaged $2,163 for 1980.

Gross farm income dropped over 8 percent as cash receipts fell by nearly 10 percent. The value of livestock and crop inventories rose by $4.3 million to account for nearly 22 percent of the net farm income after inventory adjustment. Production expenses rose slightly over 2 percent during 1980, much less than the preceeding year's 19 percent rise. Total farm production expenses for 1980 were $714.5 million compared with $699.3 million in 1979.

All livestock and products items posted lower prices except wool, milk and milk cows. Sheep prices took the sharpest drop, $11.80 per hundredweight, to average $20.20 for the year or only 63 percent of the 1979 level. Calf prices declined 12 percent while beef cattle averaged 9 percent lower. Lamb prices dropped 7 percent. Wool and milk prices both averaged 7 percent higher than during 1979.

Through 1980, cattle numbers increased 1 percent to 1,350,000 head. Beef cow numbers rose 2 percent. The 1980 calf crop totaled 640,000 head, or 10 percent more than the 1979 crop. Sheep numbers rose 6 percent during 1980 posting the first increase since 1969. The total 1,110,000 head included 990,000 stock sheep and 120,000 sheep and lambs on feed for slaughter. Total sheep and lamb losses during 1980 were down 18 percent to 195,000 head primarily due to mild winter weather. Predator losses were down in total but comprised a larger percentage of the losses due to the much sharper decline in weather-related deaths. In 1980, predators accounted for slightly over 47 percent of all sheep and lamb losses as compared to slightly over 42 percent in 1979. Hog numbers declined 6 percent to 30,000 head consisting of 25,000 market hogs and 5,000 breeding hogs.

The total liveweight of cattle and calves marketed during 1980 declined 8 percent primarily due to selling slightly over 6 percent fewer head. Total cash receipts of $467,242,000 were 16 percent below the 1979 level for cattle and calves. Sheep and lamb marketings declined 9 percent to 49,104,000 pounds. The number of head was down 2 percent. Cash receipts from sales of sheep and lambs dropped slightly over 23 percent to $22,713,000 for 1980. The total liveweight of hogs marketed rose 11 percent to 10,230,000 pounds. Four thousand more head were marketed than in 1979. Cash receipts rose 2 percent to $3,897,000. Wool output rose 7 percent to 10,205,000 pounds (grease basis) in 1980. Cash receipts from sales of wool rose 14 percent to $9,899,000. Cash receipts from the sale of milk rose 19 percent due to 11 percent more production and higher prices.

Total production of field crops in Wyoming was 4 percent above 1979. The spring planting season was characterized by cold, wet weather which delayed planting progress for most crops. Then rapid warming occurred and accelerated the maturity of crops in general. The fall harvesting period was mild and open, allowing farmers ample time to harvest their crops. Drought conditions prevailed in the Northeastern corner of Wyoming throughout the season. Irrigation water was adequate in most areas. Hay, spring wheat and corn silage yields were below 1979 levels but all other yields were higher. Total production of barley, hay, spring wheat and corn silage was below 1979. All other crops were larger.

Total harvested acreage was basically unchanged from 1979 with the largest shifts in winter wheat and alfalfa hay. Cash receipts from the sale of crops were nearly 20 percent above the 1979 levels at $126,361,000. Prices for all crops were higher in 1980 than in 1979 with increases ranging from 2 percent for dry beans to 31 percent for oats, 32 percent for rye and potato prices double those of 1979. The four largest contributions to the increase in cash receipts were made by dry beans, wheat, sugar beets and barley in that order. These four crops accounted for 96 percent of the total increase in cash receipts from crops.

Kirby Cavett
Assistant Statistician in Charge

SPRING FREEZE HAZARD TABLE

NOTE: Persons using this table should establish the temperature relationship between one or two of the nearest stations listed and their own locale. This is because the generally rough terrain of Wyoming produces many variations in climate from one point to the next.

PROBABILITY OF TEMPERATURE DROPPING TO 32° AND 28° AFTER DATE SHOWN

FALL FREEZE HAZARD TABLE

NOTE: Persons using this table should establish the temperature relationship between one or two of the nearest stations listed and their own locale. This is because the generally rough terrain of Wyoming produces many variations in climate from one point to the next.
